Immunization Schedule:

- Before age 7: 5 doses of DTaP
- Age 11-12: Tdap Vaccine
- Adults: Tdap Vaccine

School is in Session: Educate Yourself

- Whooping Cough is still affecting our community!
- The main symptom is a cough.
- If coughing, stay home, call your doctor and
- Get tested even if your cough isn't severe

Protect Yourself & Your Family: Vaccinate!

- Children, adolescents and adults should all receive a vaccination against Whooping Cough
- Please talk with your health care provider or call Island County Public Health with specific vaccine questions
